Chemical Reaction
Engineering and
Catalysis Chemical
Reaction Engineering is
the study of chemical
reaction kinetics and
chemical reactors.

More than 90% of
chemical reactions in
industry use catalysts.
Catalysts accelerate
reaction rates via
providing alternative
low energy reaction

engineering has contributed remarkably in bringing laboratory-developed chemistry into commercial practice. Reaction engineering is useful for analysis of reactions, identifying rate-limiting steps, determining overall rates, selection of reactor configuration and design and scale-up of reactors.

Catalytic Reaction

Catalytic Reaction
Engineering -
ScienceDirect Dover

Chemical reaction engineering is that engineering activity concerned with the exploitation of chemical reactions on a commercial scale. Its goal is the successful design and operation of chemical reactors, and probably more than any other activity, it sets chemical engineering apart as a distinct branch of the

Catalytic reactions
involving C-C bonds
are widely used for the
conversion of
unsaturated fatty
compounds to prepare
useful monomers for
polymer synthesis.

Heterogeneous
catalysis has played a
modest role so far in
the production of
monomers for polymer
manufacture.

Interestingly,
dimerization of fatty
acids by
