There are two types of signals - discrete-time and continuous-time signals. Discrete-time signals are defined at the discrete moment of time and the mathematical function takes the discrete set of values. Continuous-time signals are characterised by independent variables

Continuous-time  
signals and systems  
never take a break.

When a circuit is wired  
up, a signal is there for  
the taking, and the  
system begins working  
— and doesn't stop.

Keep in mind that the  
term signal is used  
here loosely; any one  
specific signal may  
come and go, but a  
signal is always  
present at each and  
every time instant  
imaginable in a ...

## **Continuous-Time Signals and Systems - dummies**

Discrete-time signal:  
Discrete-time signal is the “function of discrete-time variable that has countable or finite set of numbers in its sequence”. It is a digital representation of continuous-time signal. The discrete-time signal can be represented and defined at certain
