Recent figures on electric vehicle (EV) sales in Australia show that they are on track to decline for the first time this year, but that a local shift to 100 per cent EVs is still both feasible and affordable. With a drop of around 19 per cent for electric and hybrid car sales in the first 10 months of 2016, compared to the same time last year, what's putting our interest into reverse?

The reverse link has both open loop and closed loop power control. In the open loop, the reverse link transmission power is set based upon the received power on the forward link. In the closed loop, the reverse link power is adjusted up or down 800 times a second, as indicated by the serving sector (similar to 3G1X). All of the reverse link channels are combined using code division and transmitted back to the base station using BPSK where they are decoded.
