people, all forest types belong in one group - the forest biome. But others think that temperate forests (seasonally cold) with pine trees, are very different from tropical rainforests, with dense, leafy canopy and lots of rain. This difference of opinion means that the number of biomes can range anywhere from 5 to 20 biomes.

So, why are these forests so special? Rain-Forest. Get it? Whoever first put "rain" in front of "forest" to describe rainforests probably had a pretty easy time making that decision. Rainforests get a lot of rain—between 50 and 260 inches every year. While 50 inches is just over four feet, 260 inches is over 21 feet, which is a lot of water.
