Geomorphology And Glacial History Of

Glacial geomorphology is concerned
principally with the role of glacial ice in
landform and landscape evolution while
periglacial geomorphology is

Download Free Geomorphology And Glacial History Of The

fundamentally concerned with the development of landscapes in cold, nonglacial environments. Unlike the obviously profound impact glacial ice has on landscape evolution, periglacial conditions are often viewed as acting to modify landscapes in cold climates and not to form distinctive landscapes in their own right.

Glacial geomorphologists investigate glacial deposits such as moraines, eskers, and proglacial lakes, as well as glacial erosional features, to build chronologies of both small glaciers and large ice sheets and understand their motions and effects upon the landscape.

Geomorphology - Wikipedia

Download Free Geomorphology And Glacial History Of The

Glacial geomorphology is principally interpreted from the multibeam bathymetric data and to a lesser extent from the seismic reflection profiles. Features such as teardrop shaped, lineated and sculpted bedrock are all interpreted as the product of glacial modification (e.g. Bradwell et al., 2007 , Bradwell et al., 2008c , Evans et al.,
