COVID-19: What's RNA research got to do with it?

It is the smallest type of RNA and accounts for 15% of total RNA in the cell. Due to its smallest size, it is also called soluble RNA.

Basic structure of tRNA of prokaryotes and eukaryotes is same.

function without the formation of an extremely precise secondary structure [1-4]. For instance, ribosomal RNAs (rRNAs) must form structural folds that enable interactions with the correct ribosomal subunits at specific locations along their length, thereby allowing the formation of functional ribosomes [5].
