Early in our research into RotorWay helicopters, we were surprised to discover that operators are required, by factory instructions, to do an extensive valve train inspection and adjustment procedure every 25 hours of operation. We were even more surprised to discover that the RW engine uses solid lifters and lash caps in the valve train.

Issues with the RotorWay Engine - epi-eng.com

RotorWay's official position is that their 35mm secondary shaft has solved the secondary shaft breakage problem, and in Late 2003, they published a lengthy study to justify that position. ... The primary source of that vibration energy is the engine, which operates around 4250 RPM. At that speed, the engine torsional excitation (141.7 hz.) is ...

Secondary Failure: Introduction (RotorWay Helicopter)

Introduced in 1976, the Scorpion 133 was no different from the Scorpion Too, except for the new RW133 engine installed. This engine, the first built by RotorWay, was a 4-cylinder, 4-cycle, 133 horsepower (99 kW) engine. In 1977, because of the increased engine power, the length of the Scorpion's blades increased, from 24 feet (7.3 m) to 25 feet ...

RotorWay Scorpion - Wikipedia
