There are approximately two rings of cartilage per centimeter of trachea and each tracheal ring is an average of 4 mm in height. The wall of the trachea averages about 3 mm in thickness.

### Surgical anatomy of the trachea. - Abstract - Europe PMC

The surgical approach to the trachea developed at a slower pace than that to other areas of thoracic surgery owing to the rarity of tracheal tumors, the anatomic complexities of reconstruction, and the biologic incompatibilities that met efforts at prosthetic reconstruction. 21 Earlier hesitations because of problems of physiologic management during reconstruction proved to be less formidable. The growth in frequency of postintubation benign lesions, due to the success of modern respiratory ...
